

Det Norske Veritas Certification AB (DNV) is an independent verification and certification company. DNV has reviewed Tricorona Climate Partner's model for calculation of climate impact that can be used by air passengers in order to decrease their impact on climate when flying. The description of the model and how the calculation is performed are described in Tricorona Climate Partner's homepage.

Verification has been performed by:

- Evaluation of the data that the model is based on
- Evaluation of the scope and the assumptions made in the model
- Interview with the responsible individuals at Tricorona Climate Partner

DNV has found that the emission factors and assumptions made are from recognized sources. The results from the model give reasonable values for the climate impact with the defined limitations and stated assumptions.

Changes in the model and assumptions due to increased scientific knowledge on climate impact and information published by airlines will be verified yearly by DNV.
